

High Level Overview: Draft

The diagram shows the three-column structure clearly:

Rider (purple) — the frictionless path. A daily rotating code entered on the phone means zero password management for transit users. The three screens (code entry with dots, live ride map, pass list) cover the full daily loop.

Driver (teal) — identity-first. Name + PIN on a tablet suits a shared-device environment where multiple drivers might clock in on the same unit. The flow goes sign-in → job queue → end-of-day summary.

Owner (coral) — full credentials, full power. Email + password on laptop unlocks the analytics layer — metric cards, revenue chart, driver roster — none of which riders or drivers ever see.

Driver App

1 LOGIN

Landscape tablet — wide keypad + driver select side by side

Driver login

Select driver name

Marcus T.

Priya S.

Luis R.

Driver taps their name from a pre-loaded roster. No keyboard needed.

Enter 4-digit PIN

• • _ _

2 CONFIRM ASSIGNMENT

Your assignment today

Bus 1

Rancho loop

8 stops · est. 2 hrs 20 min

Assignment is server-pushed; driver cannot self-select.
Read-only confirmation step.

If assignment is wrong → "Not my bus" link sends alert to dispatch.

Not my bus? [Contact dispatch →](#)

▶ Start route

View stop list

Bus running

Screen 2 → Screen 3 · "Start route" tapped

3 DRIVING · GPS BROADCASTING

En route GPS live

● GPS broadcasting

Riders can see bus

Map placeholder · bus icon moving

Next stop: **Leones Cellars**

Pax on board: **4**

Break controls

Off-service / break ☐

DECISION
Hide bus from riders during driver break?
Toggles off-service state (Screen 5).

Arrived at stop →

Driver taps "Arrived" when physically at stop — advances to Screen 4.

Screen 3 → Screen 4 · Driver taps "Arrived at stop"

4 AT-A-STOP (CORE SCREEN)

Stop check-in

📍 Arrived at Leones Cellars

DECISION
Mandatory tap at every stop, even empty ones? Logs timestamp + GPS for audit trail.

Stop 3 of 8 · ETA was 2:14 pm · now 2:16 pm
